Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Martin (US 5,452,011).

As for claims 1-3 and 8-11, Martin teaches of comparing first and second fields and said first field being a successive field of said second field (Column 2, Lines 24-36); comparing pixel values of respective sub-blocks of said first field and a third field, said second field being a successive field of said third field (Column 2, Lines 11-23); determining whether said first field is an interlaced field or a progressive field (i.e. non-interlaced) with respect to a successive field of said first field based on said steps of comparing (Column 3, Lines 1-13); step of accumulating in an accumulator means absolute difference between the pixel values of said first and third fields (Column 2, Lines 11-23); step of determining if further based on an output of said accumulator means (Column 3, Lines 1-13).

As for claims 4 and 12, Martin teaches of step of determining whether said first field is a repeated field based on a result of said step of comparing pixel values on said output of said accumulator means and on a result of said step of determining whether said first field is an interlaced field or a progressive field (i.e. non interlaced) (Column 4, Lines 20-40).

As for claims 5 and 13, Martin teaches of step of determining whether or not there has been a scene change between said first and third fields, at least in part based on said output of said accumulator means (Note: where an isolated field is included which is basically out of sequence (i.e. scene change is drastically different than previous frame) Column 4, Lines 41-57).

As for claims 6 and 14, Martin teaches of step of grouping successive fields according to one or more of said steps of determining (Column 4, Lines 11-19).

As for claim 7, Martin teaches of step of comparing first and second fields provides an output of the sum of a plurality of absolute pixel differences between respective said first and second fields, said absolute pixel differences exceeding a threshold value (Column 3, Lines 33-39).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew Haney whose telephone number is 703-305-4915. The examiner can normally be reached on M-Th (7-4:30), Every Other Friday Off.
